## **Overview and Revisions:**

Several revisions needed to be made after the initial wireframe was created.

I had originally been a little too ambitious on the wireframe and included several bloated features but once I began development I removed them due to being unnecessary. Some of these were related to table button features which while initially seeming to be a good idea, turned out to be unnecessarily complicated.

I was also unfamiliar with Xamarin's UI design tools and the original version of the wireframe was not reflective of the UI tools that were available. Due to this I revised the wireframe to contain the same content but designed to reflect the Android interface design.

While the icons used to create the wireframe were created by me, I thought using some free high fidelity icons would be better for the final product. These were licensed under created commons and while simple, they provided some visual cues to help with usability.
